

Eye2Eye bullet resistant

Provides ● improved access to the service counter for the disabled
● bullet resistant protection for staff

Introduction

Eye2Eye is a modular, fixed glazed unit with a height adjustable counter surface which can be positioned to suit individual customer needs.

Staff protection against ballistic attack is never compromised as the security glazing moves up and down with the counter. The counter is electrically powered and can be raised or lowered to any height between its fully raised position of 1050mm and its fully lowered position of 760mm.

Description

Eye2Eye allows public service organisations to make "reasonable adjustments" in accordance with the Disability Discrimination Act, with design features that overcome many of the access issues of a conventional counter, such as:

- Variable Height Counter
- Induction Loop Hearing Aid Enhancement
- Active Microphone/Loudspeaker Speech Transfer System
- Deep, Scalloped Counter Edge
- Shallow Sloping Pass Tray
- Recess for Wheelchair Footplates
- Contrasting Colour Scheme

The counter height is normally controlled by the staff. The public side control buttons can be activated by a staff switch. An obstacle detection system is mounted under the entire public counter area to allow height adjustment without risk to public users.

Glazing

The glass performance offers protection against ballistic attack (armed robbery) to BS EN1063 Classes BR4 and SGI.

◀ Counter may be lowered to suit wheelchair users

Finishes

The powder coated steel framework is available in standard RAL colours and provides the finished appearance on both staff and customer sides of Eye2Eye.

The counter is finished in marmoleum and is available in a variety of colours.

Installation

Installation can be carried out either by Safetell personnel or by approved sub-contractors.

Eye2Eye is a complete, floor to ceiling counter assembly which can be positioned and secured flush over, or recessed into, an existing opening.

The unit is factory assembled but the top cowl and side cheeks are removable for ease of installation.

Standard Dimensions

Height Overall	2150mm
Counter Height (Raised)	1050mm
Counter Height (Lowered)	760mm
Unit Width	1200mm
Counter Depth Front-to-Back	975mm

▶ Optional Secure Metal Shutter protects glazing when position is unattended

Servicing / Maintenance

Eye2Eye benefits from occasional planned maintenance for mechanical checks and cleaning of moving parts.

Safetell offers various extended warranty and other contract options to provide service support, with guaranteed response times if required, and has an established nationwide service network for ad-hoc repairs in the event of a malfunction.

Options

- "Position Closed" Blinds
- Secure Metal Roller Shutter
- Bespoke colours can be supplied to meet client requirements

Other Products

Safetell manufactures and installs other forms of fixed and moving bullet resistant or anti physical attack security screens and a range of cash handling equipment.
