

Press Release

December 2007

Safetell delivers full range of open plan cash management security

Safetell's range of Cash Management Units (CMUs) for open-plan offices, are purpose-designed to combine easy access to cash with high levels of security, while allowing instant deposits and time-controlled withdrawals.

All Safetell CMUs have the big advantage of enabling cashiers to increase or decrease their till drawer cash without leaving their workstation to access a main safe or refer to a head cashier. They provide the most convenient and secure way to deposit, withdraw and recycle cash with assured safe custody throughout the work process.

Safetell offers a complete range of CMUs and supporting systems, all backed by an outstanding service network that provides comprehensive after-sales support and user peace of mind nationwide. This was proven positive when engineers serviced a post office stricken by the recent floods within a day of the water receding.

Customers can choose from four Safetell CMU models to suit their daily cash throughput / utilisation : the BiDiSafe for up to £6,000, BiDiSafe Magnum for up to £12,000, the RollerCash for £20,000 and the RollerCash TRIO for up to £30,000.

Normal practice is keeping relatively small cash floats in a Flip Top Till with deposits to or topping-up from the CMU. This restricts any potential theft to a limited sum.

Safetell is the sole official contractor for the supply of these units to the Post Office network.
