# Safetell Cash Recycler launched

Safetell has now launched its new Cash Recycler, to expand its existing range of cash handling equipment.

With over 10 years of experience supplying cash handling products to large corporate clients, nationwide across the U.K, the Safetell Cash Recycler is intended to meet customer need for accurate and reliable automated banknote deposit, authentication, and dispensing at a cost effective price.

The product incorporates features designed to detect counterfeit notes while the customer is present, reduce cashier error, speed transactions or allow cashiers to focus on other activities, such as cross selling.

With a small footprint and size, and a range of steel plinths the product can be securely positioned for the ergonomic requirements of seated or standing cashiers.

Available to UL291 or CEN Grade III the Safetell Cash Recycler offers secure storage of cash in open plan banking environments, or 'agency' positions.

Anton Pieterse Managing Director of Safetell Ltd said "the introduction of this product enables us to meet the progressive needs of our customers".
