

The Wavetec logo features the word "WAVETEC" in a bold, white, sans-serif font, centered within a blue rounded rectangular background.

Safetell Queue Management powered by Wavetec

Safetell Limited, a long term designer manufacturer and installer of commercial security products, with 20 years experience supplying equipment to banks, building societies, and other high street clients, now provides and supports a range of hi-tech Queue Management solutions, dynamic Customer Interaction Kiosks, wide format high quality Information Scrolling Screens, Video Walls and very large format commercial screens from the leading technology manufacturer Wavetec.

Wavetec is well known in the Middle East, U.S. Africa, and South America for supplying and installing tailored queue management systems for large corporate clients, such as banks and retail chains, allowing them to capitalise on innovations in queuing technology to enhance their operations.

Wavetec full colour high resolution Video Wall products can be seen in prestigious locations such as The Bahrain Stock Exchange, Frankfurt Stock Exchange, and numerous airports. The implementation of such high profile projects often requires specialist software; Wavetec with its large software development staff is ideally suited to provide this support and fulfil the exact requirements of the customer.

With an increasing desire for wide format high quality Information Scrolling Screens from progressive corporate clients Wavetec developed a range of high definition Information Scrolling screens, from 3m wide by 300mm tall to very large versions at 66m wide by 2m tall, curved or flat, to suit varying customer requirements.

Smaller versions of the information scroller are now being used in retail stores and banks to carry an array of images and messages helping to increase sales opportunities.

Continually focused on client needs, Wavetec Customer Interaction Kiosks benefit from the same high quality software support as other Wavetec products, to provide tailored automated kiosks that collect customer feedback, provide information, or integrate with queuing systems.

Anton Pieterse, Managing Director of Safetell, explained that Safetell's focus is to provide solutions that address our clients' issues; "Wavetec's customer need ethos fits very well with our business. Supplying and installing Wavetec products in the U.K. and Europe allows Safetell to offer our clients the advantages of the Wavetec products, and with the comprehensive nationwide project management and support services that Safetell traditionally provide".

Safetell fully understands the need for professional and complete implementation when adding new products to its portfolio, and has been working toward this with Wavetec for sometime; recently appointing Phil Tomlin, an industry expert, to lead the business development for these product lines.
