BidiSafe

BidiSafe

Introduction

Safetell BidiSafe is a secure cash handling device that allows deposit and time controlled withdrawal of cash, at the cashier position.

Cashiers can increase or decrease their till drawer cash holding without leaving their workstation minimizing transportation of bulk cash between tills and main safe thereby increasing security, and reducing the cash value held in cash drawers.

Banknotes are inserted into cassettes and loaded into BidiSafe either through the deposit slot or as a stack through the security key controlled bulk access door.

When the BidiSafe operator's key is in the ON position, single cassettes can be accessed by pressing the Request button and, after expiry of the factory set time delay (normally 60 seconds), the cassette drawer is released.

For higher capacity see Safetell Magnum, RollerCash, or Trio products.

Safetell Offers

- Nationwide installation
- Nationwide service coverage
- Capability of supply and installation for all sizes of projects

Additional Safetell Capability
