Bulk Transfer Unit

Bulk Transfer Unit

Design

The Safetell Bulk Transfer Unit features an electronic interlock that makes the opening of both doors at the same time impossible, creating an easily controlled security air lock.

Construction

An all steel construction supports a robust and functional design. Both doors are hung on heavy duty pivot hinges, incorporating oilite bearings.

Operation

Safetell Bulk Transfer Units are easy to use, with a push button to open the outer and inner sections, with indicator lights confirming door status. Each door opens 90° to rest. However, closing is assisted by gas springs to ensure positive latching. Built-in battery back-up ensures continued short term operation in the event of a power failure.

Installation

All units can be installed in walls up to 450mm thick. The fully recessed control panel enables the unit to be fitted into a simple wall opening. No dismantling is necessary. In order to protect the finish, stainless steel skid plates are fitted to the pass through area.

Options

- Roller bed for the passage of heavy items on 70 and 100 models
- A remote push button panel
- The Bulk Transfer 100 features a vision panel with internal light
- The 35 & 70 can be used in conjunction with the Paypoint Window
- All Safetell Bulk Transfer Units can be used with the Safetell range of vision panels
- Key operated override

Site Preparations

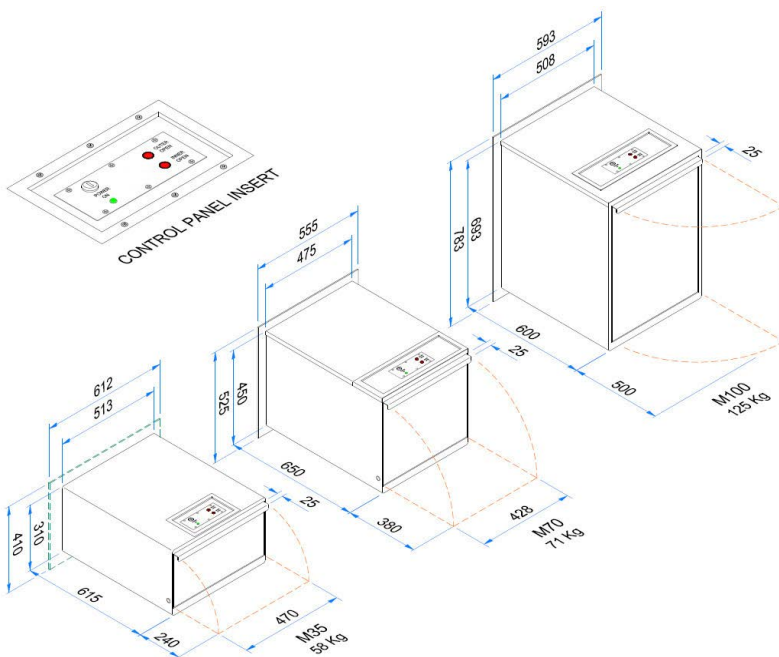

The unit is designed to be installed into prepared openings. If the installation position does not have sufficient wall width to support the unit Safetell can provide wall enhancement with CityWall.

FEATURES

- Robust all steel construction
- Simple and effective operation
- Ballistic protection in accordance with G2/S86, BS 5051 Part 1 (1988)
- Requires only a 13amp power socket
- Gas springs on both doors
- Optional rollers on 70 and 100 models
- Bulk Transfer 100 pass through area is fitted with a vision panel and an internal light
- Powder coated RAL 7038 light grey

APPLICATIONS

- The Safetell Bulk Transfer Unit is available in 35, 70 and 100 versions. These numbers indicate their approximate pass-through capacities in litres
