

NIGHTPAY HATCHES

Enabling the transaction of cash and goods at times of higher risk

Safetell
SAFETY SECURITY PROTECTION

NIGHTPAY HATCHES

Introduction

Safetell Nightpay Hatches are designed to enable the continued transaction of cash and goods at times of high risk, such as at night or during cashing up, through the separation of staff from would-be assailants.

These hatches are typically used in petrol forecourts, late night pharmacies, and other operations in which payment and goods need to be transacted.

Safetell nightpay hatches feature a movable upper payment tray, extending lower bulk item drawer, and stainless steel body construction.

This product is immediately available from stock (subject to demand).

For Nightpay Hatches with integrated electronic speech transfer see the Safetell Cashfast product.
