SAFETY SECURITY PROTECTION

Trio

TRIO

Introduction

Safetell Trio is a secure cash handling and recycling device that allows the instant deposit and time controlled withdrawal of cash at the cashier position.

Trio provides secure cash storage to BSEN1143-1 Class III certified to 97 RU, normally insurable for 24 hour cash holding up to £35,000.

Trio allows cashiers to increase or decrease their till drawer cash holding without leaving their service position. This maximizes business service time while minimizing the need to transport bulk cash between tills and main safe, thereby reducing the need to access the main safe and increasing security.

The heart of Trio is three rotating drums each with 10 segments, each segment has a capacity for up to 200 banknotes.

The drums are controlled to expose only one segment opening at any one time. In the off state and between openings segment apertures are closed.

In open plan offices each Trio position is self-sufficient with no need for back up from the main safe, and no requirement for bulk cash to be carried in the public area during opening hours.

Trio can be controlled by keypad, or PC for greater functionality and audit trail of transactions.

All models have a total withdrawal function giving access to each segment in turn, for balancing or emptying the unit once the branch is closed and perimeter is secured.

Seismic alarm detectors are typically able to be mounted to Trio units.

Safetell Offers

- Nationwide installation
- 24/7 helpdesk and nationwide support
- Tailoring of unit function to volume client operational requirements
- Bureaux de change version

FEATURES

- Instant deposit
