SAFETY SECURITY PROTECTION

Security Glazing – 21mm Blade

Security Glazing - 21mm Blade

Introduction

Safetell Security Glazing - 21mm Blade is a highly versatile, anti-physical attack glazing system, designed to protect staff and counter areas from physical attack and robbery, in operations which require the transaction of goods or objects through the glazing line.

This security glazing system is designed with a range of transaction gap styles for transaction of goods or objects, as typically required in retail stores. (Transaction gap styles are shown in the system options diagram at the base of this page).

Safetell Security Glazing - 21mm Blade is able to accommodate multiple counter heights, angles, and profiles in a single glazing run, to suit each individual store, ideal for retail environments. This system is able to be fitted to existing or new counterwork. New counterwork can be supplied by Safetell as part of a complete solution.

Vertical glazing spacing provides for transactions gaps, clear communication, and air flow while protecting staff from aggression, attack, and robbery.

Sizes and system are tailored to suit premises and corporate look and requirement.

(For a high level physical attack solution, and or protection from firearms see Safetell Bullet Resistant Glazing solutions, Fast Rising Screens, or call Safetell).

Construction

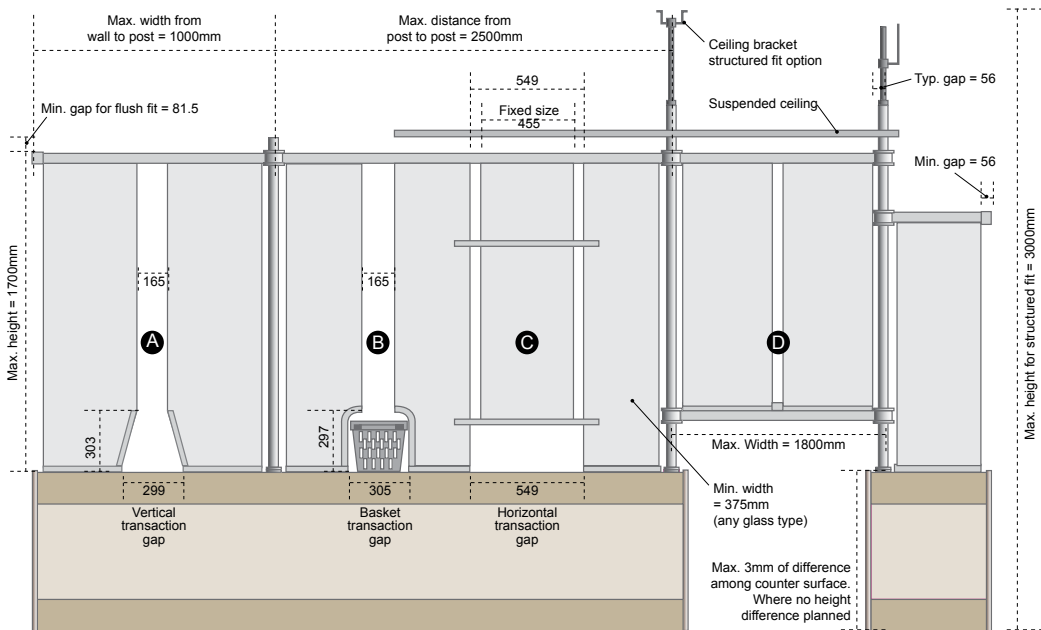

This system incorporates 21mm anti-physical attack glass, steel posts with rotational joints.

Installation

Safetell offers design, project management, nationwide installation, and complete secure-line installations, including counterwork, security doors, security walls, access control, cctv, and a range of cashier equipment and other security products.

CAD details can be provided for incorporation of these products into architectural layouts.

System Options Diagram

Sample elevation to illustrate available transaction gap types, upper fixing styles and system limitations.

Upper transoms have a rotatable design to give flexibility.

For further details on the system or if you have a requirement that does not fall within the illustrated styles please call us.

- A** Angled style transaction gap
- B** Basket style transaction gap
- C** Horizontal style transaction gap
- D** Span glazing (For spanning items such as hot counters, etc.)

FEATURES

- Allows for the transaction of goods or objects while providing staff protection
- Accommodates multiple counter heights, angles, and profiles
- Able to be fitted to existing or new counterwork
- Tailored to suit premises and corporate look
- Nationwide installation
- Complete secure-line solutions
- Centralised account management for standardised implementation

APPLICATIONS

- Retail stores, Retail environments including petrol outlets and convenience stores
- Hospitals, Healthcare centres, Local Authority service desks, Police stations
- Service desks with requirement to transfer goods or objects through the glazing line
- Applications with lone staff member service
