SAFETY SECURITY PROTECTION

Security Glazing – Full Pane

Security Glazing - Full Pane

Introduction

Safetell Security Glazing - Full Pane is a secure area, steel framed, anti-physical attack glazing system designed to provide staff and counter areas with protection from physical attack and robbery, and a high quality aesthetic appearance in keeping with high street commercial environments. This glazing system is ideal where large glazing pane sizes are required (up to 3m x 2m), or when full glazing panes with transactions made through cash scoops are desirable.

(For a high level physical attack solution, and or protection from firearms see Safetell Bullet Resistant Glazing solutions, Fast Rising Screens, or call Safetell).

Sizes and system are tailored to suit client premises and corporate requirement.

Safetell Security Glazing - Full Pane is able to be fitted to existing or new counterwork. New counterwork can be supplied by Safetell as part of a complete solution.

Construction

The system incorporates 11.5mm anti-physical attack glass, full steel frame and range of posts, catering for corners, angles, and run joints. Transactions are usually made through cash scoops recessed into the counter surface, although the system can be implemented with a horizontal transaction gap between the counter surface and glazing base if desired. Electronic speech transfer per service position is recommended, but optional, as part of this product.

Installation

Safetell offers design, project management, nationwide installation, and complete secure-line installations, see below for more details.

CAD details can be provided for incorporation of these products into architectural layouts.

Options

- Tailored or bespoke design to suit corporate operation and look
