

SECURITY SCREENS

Protection for staff and counter areas from physical attack and robbery

Safetell
SAFETY SECURITY PROTECTION

SECURITY SCREENS

Introduction

Safetell Security Screens are a secure area screening system designed to protect staff and counter areas against physical attack and vaulting of the counterwork by assailants, in operations that require the transaction of goods or objects through the secure line.

Safetell Security Screens are extremely versatile, able to accommodate multi-tiered and shaped counterwork; can incorporate vertical and horizontal transaction gaps for clear communication, transaction of goods, non-reflective sight lines, air flow, combined with a high quality aesthetic appearance.

Sizes and system are tailored to suit client premises and corporate requirement.

Safetell Security Screens are able to be fitted to existing or new counterwork. New counterwork can be supplied by Safetell as part of a complete solution if required.

For higher level anti-physical attack solutions see Safetell Security Glazing - Full Pane, Security Glazing - 21mm Blade, Bullet Resistant Glazing solutions, or for further advice call Safetell.

Construction

The system incorporates tough anti-physical attack plastics (not glass), and steel.

Installation

Safetell offers design, project management, nationwide installation, and complete secure-line installations, see below for more details.

CAD details can be provided for incorporation of these products into architectural layouts.

Options
