Vision Panel Bulk Transfer Module

Vision Panel Bulk Transfer Module

Design

The Safetell Vision Panel Bulk Transfer Module combines two proven Safetell products; the Stalwart steel door and Bulk Transfer Unit. It provides a solution for the secure transfer of cash and valuables in external locations. The whole unit offers significant manual and ballistic attack resistance.

Construction

The outer frame and external door are factory primed ready for finishing on site, whilst the Bulk Transfer Unit 70 is powder coated light grey. The surrounding framework for the security laminated glass vision panel and the external audio cover are both finished in satin polished stainless steel.

Ballistic protection to G1 and G2 and BSEN 1522: 1999 is maintained throughout the module.

Operation

The external door can be either opened by an authorised key held by the courier or by the courier alerting the staff by the call button/microphone. Once the door is open a member of staff controls the access of the electronically controlled Bulk Transfer Unit doors - only one door can be opened at a time. Each door opens 90 degrees to rest; closing is assisted by gas springs to ensure positive latching.

Installation

The outer frame is secured into a prepared opening and then the module is secured into the frame. Two electrical power points need to be located near the module to provide power to the Bulk Transfer Unit and the electrical door release/intercom.

Site Preparation

The unit is designed to be installed into a prepared structural opening of 800mm wide x 1000mm high with cavities closed and finished.

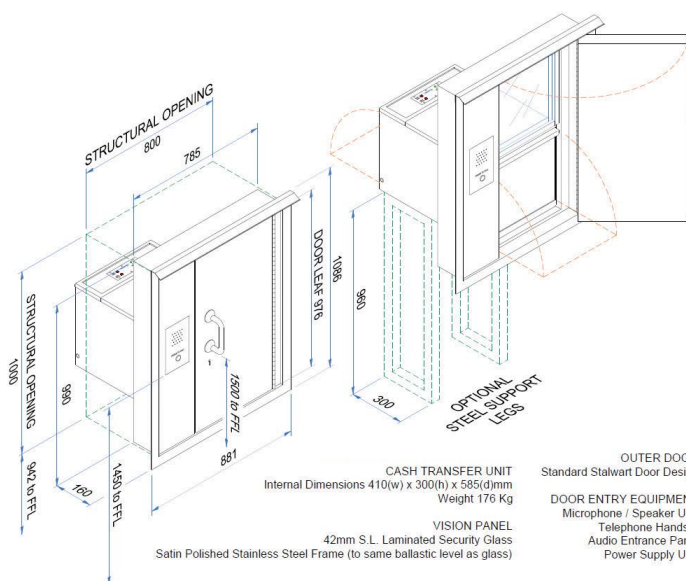

If the installation position does not have sufficient wall width to support the unit Safetell can provide wall enhancement with CityWall.

FEATURES

- The unit offers significant manual and ballistic attack resistance in accordance with G1 and G2 and BSEN 1522: 1999
- Integrated electronic intercom
- Stalwart outer door offers increased vandal and weather resistance
- Stalwart door locked by a Chubb 3R35 mortice locking latch with electrical door release fitted into the stile
- Bulk Transfer Unit 70 has electronically controlled interlocking doors with battery backup in the event of power failure

APPLICATIONS

- Banks, Building Societies
- Cash Centres
- Bureaux De Change
- Retail stores
