

Security Doors

External Steel Door

**Strong and Versatile
External Doors**

APPLICATIONS

- Filling Stations
- Car Parks
- High Street Retailers
- Local Authorities
- Corporate Offices
- Pharmacies

PRODUCT DETAILS

Provide better accessibility with our External Steel Doors. Featuring industry leading construction, External Steel Doors are strong, versatile and durable doors and door sets designed to provide robust outdoor protection. External Steel Doors can be customized to your exact appearance and technical specification.

DIMENSIONS

Single Door Width: 690mm – 1340mm
Double Door Width: 1000mm – 2600mm
Height: 1500mm – 2800mm

WEIGHT

Variable weight depending on specification.

FITTING

Steel Doors can be tailored in accordance with your bespoke requirements.

RESISTANCE

External Steel Doors can be custom manufactured as fire rated doors. These fire rated doors are designed to contain and prevent the spread of fire for an unspecified time. Our fire rated doors are available in latched and unlatched configurations, with ratings varying between classifications, up to BS 476 Parts 20 and 22, and BS EN 1634.

ACCREDITATION

PERFORMANCE

BULLET	
BLAST	
M. ATTACK	✓
FIRE	✓

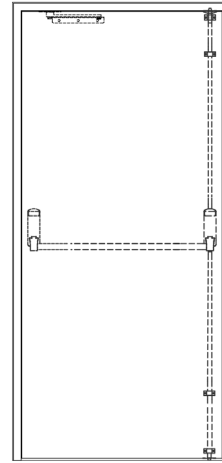

DESIGN CONSIDERATIONS

With a contemporary and sleek look that is designed for protection against the harshness of the outside environment, External Steel Doors are offered in a variety of specifications per your exact requirements.

Doors are available in polyester powder coating, and the door blade can be implemented through several options.

The door blades are constructed using two 1.2mm corrosion resistant steel sheet lock-formed together by two 1mm bonding skins of Aluzinc formed around a rigid honeycomb core using a no-weld construction.

External Steel Doors have 1.5mm frames, as well as 10 year anti-corrosion guarantee (subject to site location).

SITWORK

External Steel Doors are supplied fully assembled with hardware fitted as standard which, when combined with our adjustable fixing feet and variable sub-frame, reduces installation time on site, adding value to the end-project.

SERVICE & MAINTENANCE

The single fix design of our doors can offer greater cost savings when priced against overall installation times for timber doors, and the inherent durability of steel means that in areas of high traffic or potential abuse, the lifetime cost of steel doors can be significantly less than timber doors. Safetell's service division provides the UK with complete maintenance call out services for all Safetell products.

HEALTH & SAFETY

Steel Doors must be installed by Safetell's technical specialists into prepared openings. In order to comply with BS EN 1125 and BS EN 179 standards, we can fit a range of panic hardware for both emergency applications for both private and public usage.

ADDITIONAL INFORMATION

External Security Doors can be fitted with a wide range of enhancements for your specialized needs, including:

- Panic Hardware
- Vision Panels
- Louvre Panels
- Side & Over Panels
