Intruder Resistant Steel Door

**Secure LPCB
Certified Doors**

APPLICATIONS

- Data Centres
- Government Buildings
- High Street Retailers
- Corporate Office
- Supermarkets
- Industrial Estates

PRODUCT DETAILS

Keep your premises secured with our Intruder Resistant Steel Door designed to offer an enhanced level of security over traditional standard Internal and External Steel Doors. Certified to the LPS 1175 loss prevention standard to provide increased security against attempted entry from professional testers.

DIMENSIONS

Single Door Width: 690mm – 1340mm
 Double Door Width: 1000mm – 2600mm
 Height: 1500mm – 2800mm

WEIGHT

Variable weight depending on specification.

FITTING

Steel Doors can be tailored in accordance with your custom requirements.

RESISTANCE

Intruder Resistant Steel Doors are certified to the LPS 1175 standard, offering protection between SR2 to SR4, with a maximum survival time of 10 minutes when used against a range of tools, such as: high powered cordless tools, sledgehammer, power drills, disc grinders, etc.

ACCREDITATION

PERFORMANCE

BULLET	
BLAST	
M. ATTACK	✓
FIRE	

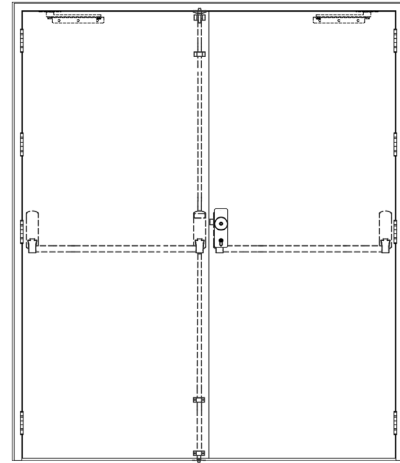

DESIGN CONSIDERATIONS

Intruder Resistant Steel Doors are highly configurable and can be constructed to your bespoke requirements, allowing our doors to seamlessly fit into any corporate or public environment facing a risk of intruders.

Polyester powder coating is available, with availability for both standard and non-standard colour selections.

Our Steel Doors offer a range of customisable locking alternatives, including: deadlocks, latches, sashlocks, toilet locks, nightlatches and mortice multi-point locks.

We also offer a robust selection of Panic Escape hardware, offering protection for Emergency Application EN 179 and Panic Application EN 1125, covering both private and public environments.

SITWORK

The doorsets are supplied fully assembled with hardware fitted as standard which, when combined with our adjustable fixing feet and variable sub-frame, reduces installation time on site, adding value to the end-project.

HEALTH & SAFETY

Steel Doors must be installed by Safetell's technical specialists into prepared openings.

SERVICE & MAINTENANCE

The single fix design of our doors can offer greater cost savings when priced against overall installation times for timber doors, and the inherent durability of steel means that in areas of high traffic or potential abuse, the lifetime cost of steel doors can be significantly less than timber doors. Safetell's service division provides the UK with complete maintenance call out services for all Safetell products.

ADDITIONAL INFORMATION

Intruder Resistant Doors can be constructed to your needs, catering to the level of basic protection and attack you need covered. We also offer a fully louvered door, offering the maximum free airflow while maintaining the necessary strength and durability needed. The ventilation system achieves a free area of 55% percent without compromising your security choice.
