

FRAMELESS SECURITY GLAZING

DIMENSIONS (mm)

Max pane H: 1700

Max pane W: 455

WEIGHT

Bespoke to project requirement

RESISTANCE

Successfully tested to withstand manual attack from a variety of tools including various hammers, axe and baseball bats.

DATASHEET

FRAMELESS SECURITY GLAZING

Frameless Security Glazing is a secure area glazing system designed to protect staff and counter areas against lower level physical attack and vaulting of the counterwork in operations that require the transactions of goods past the glazing line. The applications are endless but include petrol forecourts, convenience stores, hospitals, health care centres and commercial buildings.

MAIN FEATURES

- Provides protection from physical attack and vaulting of the counterwork
- Sizes and system tailored to suit client premises and corporate requirements
- Can be fitted to new or existing counterwork
- Vertical posts are not necessary reducing visual obstructions

OPTIONAL

- Counterwork can be supplied as part of the solution
- Speech transfer not necessary as communication travels through the transaction gaps
- Bespoke shapes and sizes to suit customer requirements
- Optional "fog" blades available

TECHNICAL DRAWINGS

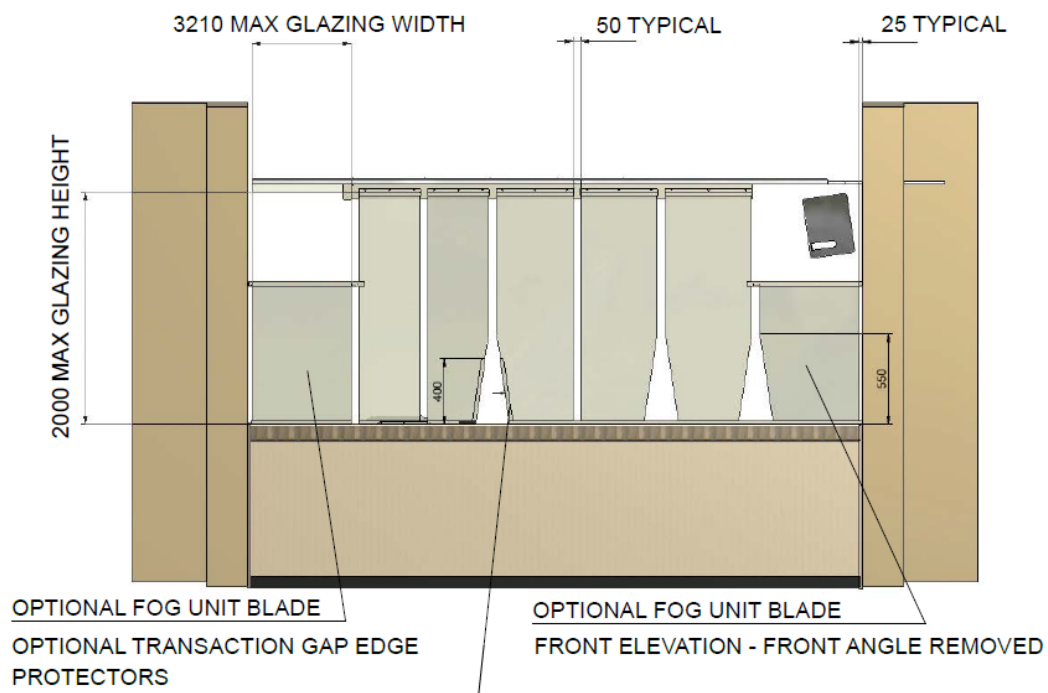

Sample elevation to illustrate available transaction gap types, upper fixing styles and system limitations.

Upper transoms have a rotatable design to give flexibility.

For further details on the system or if you have a requirement that does not fall within the illustrated styles please call us.

- A** Angled style transaction gap
- B** Basket style transaction gap
- C** Horizontal style transaction gap
- D** Span glazing (For spanning items such as hot counters, etc.)
